**APPLICATION TO INTEGRATE THE BEDC PAYMENTS APPLICATION
PROGRAM INTERFACE (API)**

Dear Sir/Madam,

I am writing on behalf of Egis Technologies Limited, an information technology company registered as a technology solution provider in Nigeria.

I wish to apply for the uninterrupted usage of your Application Program Interface (API) for the provision of BEDC payment services for our customers.

Egis Technologies has a core banking system (CBS) which is used to manage microfinance operations. Microfinance institutions in Nigeria use it to manage their operations. We recently integrated bill payments services, airtime and databundles, and electricity bill payments, however we noticed that while we were able to easily access the API of other DISCOS, we couldn't find that of BEDC, hence our reason for contacting you.

We are well aware that quickteller.com already has BEDC payment services, but due to the unstableness of their service we will not be able to utilize it as we need quality and reliable service.

We hereby request for an access to your API to enable us integrate it into our core banking system so as to enable all the Microfinance Institutions, banks and later commercial banks using our CBS sell BEDC PREPAID AND POSTPAID payments to their customers.

This collaboration will be beneficial to both your organization and ours because of the spread of the organization already using our CBS.

We sincerely hope you consider this request and give us details on how we can proceed with the integration of BEDC services into our Egis CBS.

Thanks for your cooperation.

We await your response.

Yours Faithfully,

Louis Akporiaye,

Co-Founder, Egis Technologies Limited.
